MHR

Pension
Data Service

Automated, scalable and compliant for pain-free accurate returns.

Introduction

Producing accurate pensions returns has never been so difficult and time consuming for organisations. It can take more than four weeks to complete at the end of the tax year and other schemes moving to monthly submissions forces the pressure of year end into a smaller monthly window.

You don't have time to worry about the risk of fines, or to struggle compiling your data, particularly when it's manual and the drive for accuracy increases. This is on top of all your other critical HR and payroll tasks as schemes become more complex adding further pressure to already stretched resources.

Avoid the headache. MHR's proven Pension Data Service can take all those pension pains away providing you with meaningful outputs to your given pension specifications.

With MHR's automated service, our experts can extract the relevant information from your payroll system to provide you with accurate data returns in the correct format for your pension submission - whether it's monthly or annually.

With no need for manual manipulation or intervention, our service gives you the reassurance of compliant data for submission every time, taking the stress and pressure away from your team to refocus on their core business projects.

Whether you're in the public or private sector, our automated service is the ideal returns solution to help you meet this key regulatory requirement without the strain on your resources. We'll manipulate the data, while you keep control of the submission process.

MHR's Pension Services supports over 150,000 complex employee pensions, across 60 different organisations covering schemes including LGPS, TPS (MDC and MCR), SPPA, i-Connect, NHS, Scottish Widows, Aviva, People's Pension, RPMI, Standard Life, Prudential and Legal and General.

The complex made simple

MHR's Pension Data Service delivers the data expertise you need with flexibility and scalability.

No matter which HR or payroll system you use, our experts manipulate your data into the correct format for your pension submissions including supporting specification changes.

Our team of experts are there to support you, improving efficiency, saving time, and avoiding the costs of dedicated in-house resource or expensive bespoke consultancy.

In partnership with key organisations such as iConnect, our proven solution is recommended for providing the right format for their returns and is available for any HR or payroll system.

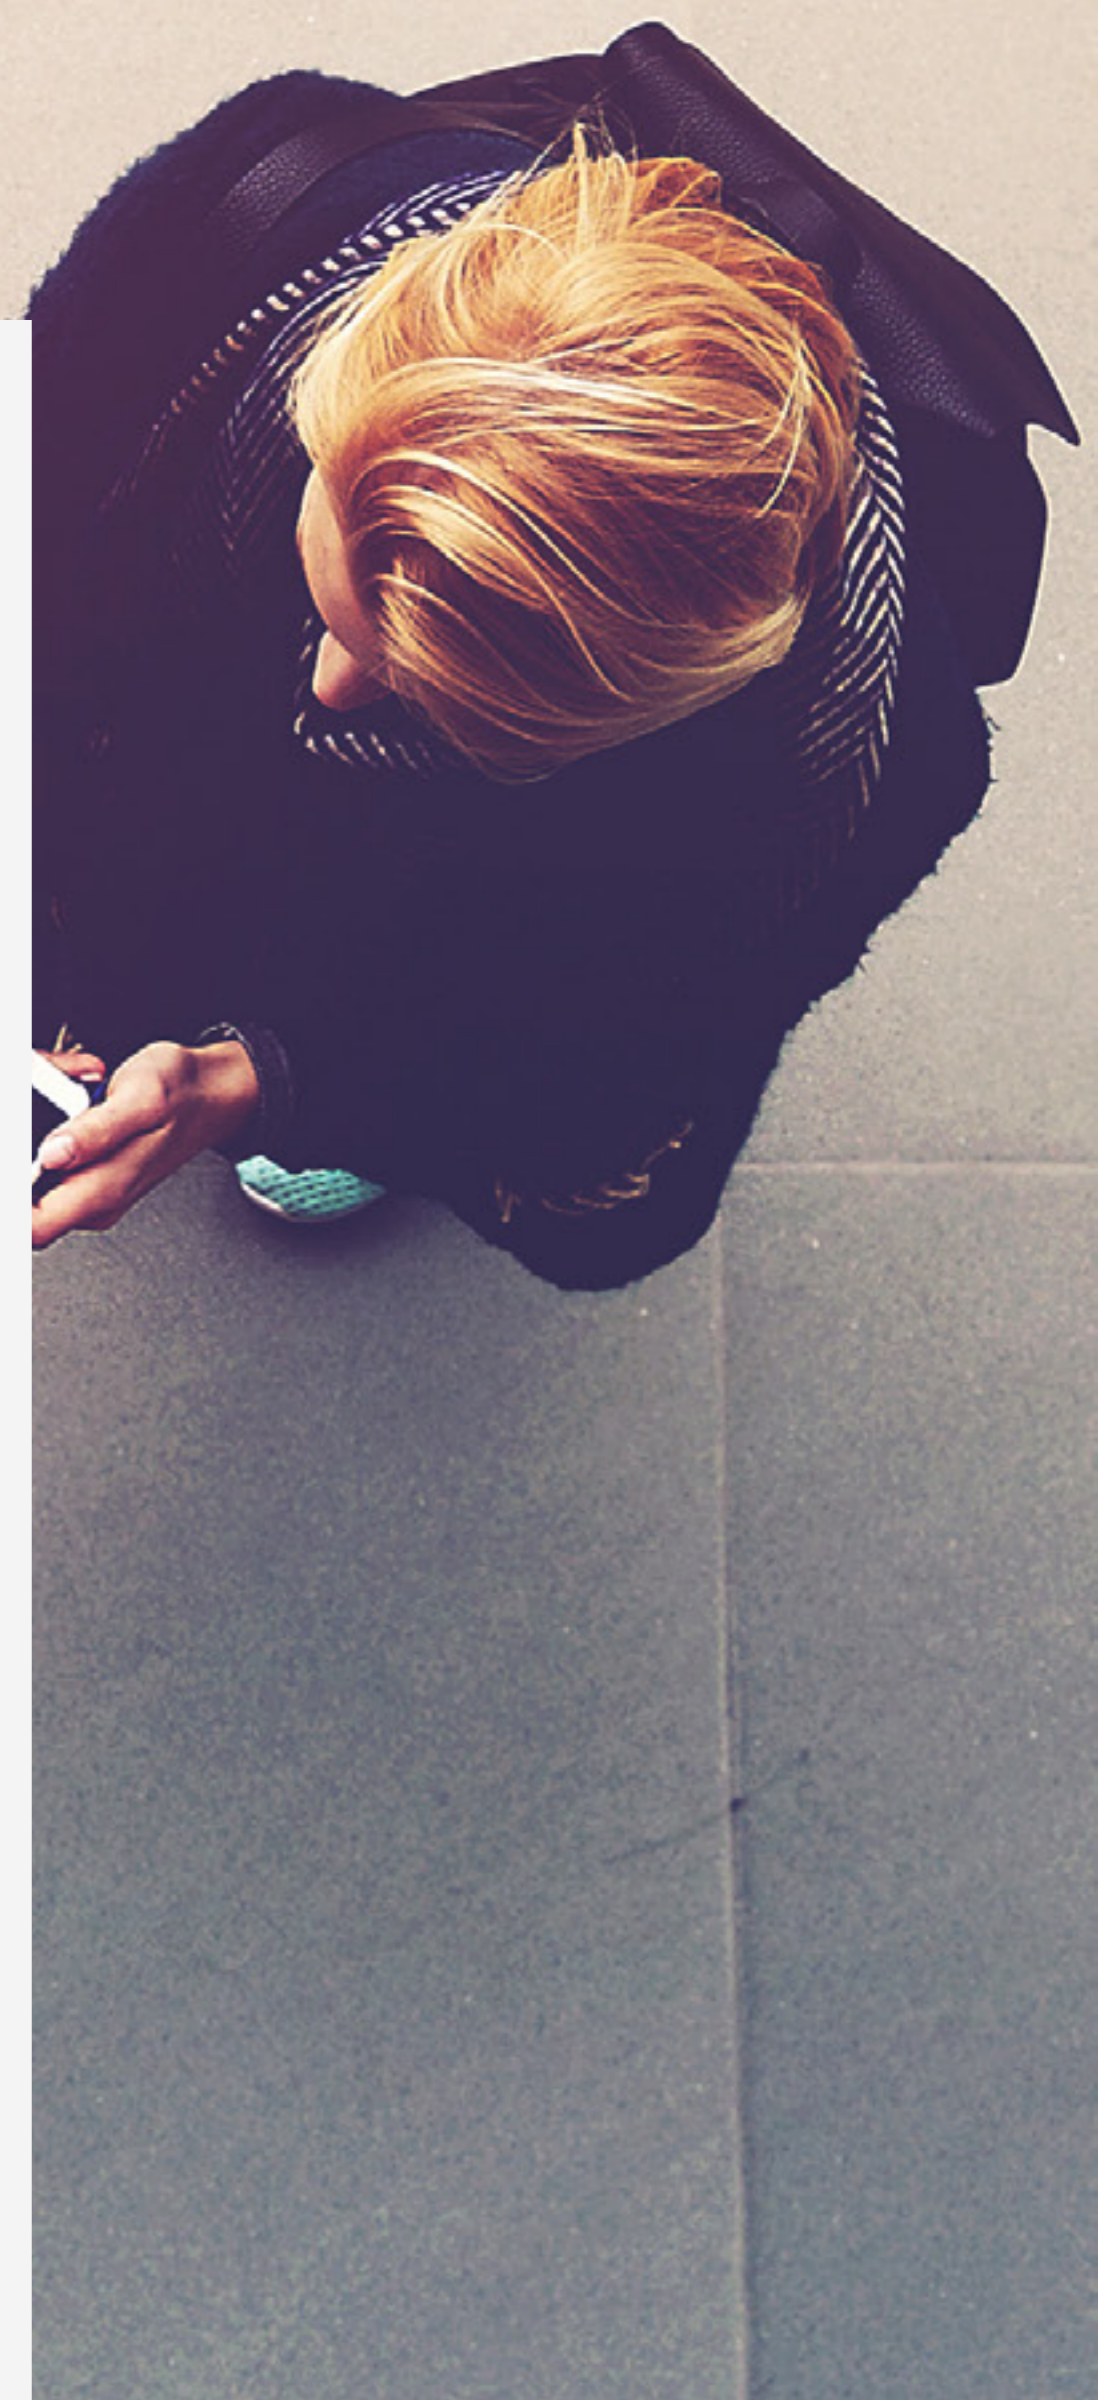

Our Pension Data Service can help you with:

- Manage internal costs
- Improve reporting accuracy for compliant returns to reduce the threat of fines
- Managed through a single source to improve your audit trail
- Support statutory changes to submissions
- Protect your data with secure hosting from MHR's state of the art data centres
