

iTrent Shield

Multi-Factor Authentication
(MFA)

Enhance the protection of your critical HR and payroll data.

According to a 2020 report by the Department for Digital, Culture, Media and Sport, around a half of businesses and a quarter of charities reported cyber security breaches or attacks in the previous 12 months. MHR's iTrent Shield Multi-Factor Authentication (MFA) has been developed to deliver an even greater level of security for the data held within iTrent.

This is crucial at a time when many employees are working from home where you could be more vulnerable to cyber attacks. The solution enables organisations to easily add MFA to their existing iTrent platform to instantly increase the level of security.

How iTrent Shield MFA provides extra protection

iTrent Shield MFA protects against employee user accounts from being compromised by malicious cyber-attacks, such as:

- Phishing emails which obtain user names and passwords
- Credentials obtained from data breaches from another organisation
- Employee credentials being guessed

How iTrent Shield MFA can help your organisation

- Reduces the risk of sensitive data being stolen or employee salary payments being diverted
- Enables you to safely provide access to your HR and payroll system from anywhere
- Reduces the need for employees to use corporate secure remote access solutions, such as VPNs, potentially saving money in licence costs

How iTrent Shield MFA works

In addition to their normal username and password, extra security is provided by requesting the employee to enter a second factor of authentication. This consists of a rotating 6-digit passcode that is obtained from an authenticator application accessed through their mobile phone. iTrent Shield MFA is compatible with both the Microsoft and Google authenticator applications, allowing employees to utilise tools that they are already familiar with.
