

Arbor

## Arbor MIS integration

We support over 1,800 educational establishments by streamlining their operations and reducing unnecessary admin to make the day-to-day easier.

Discover how our HR and payroll solution can seamlessly integrate with your existing MIS to make those efficiencies stretch even further.

## How does the integration work?

Our Arbor MIS integration supports information sharing and updates around several key areas of your people data; from staff personal and occupational details to attendance records, salary information and more, ensuring that critical staff data is always accurate, accessible and up to date.

The integration means you'll only need to add or update the details once, and the information will be reflected in both systems. You can set the frequency of data flow between your HR system and your Arbor instance as you need, ensuring that both systems always have the most current and accurate information available.

### Person

When a new person is created or amended in your MHR HR system, the same details will be created in Arbor.

### Position/occupancy

When a person is attached to a position/occupancy or the details are amended within your MHR HR system, the respective fields are posted to Arbor. This covers details around contracts, positions, salary details and more.

### Absence

When an absence is created, amended or deleted within your MHR HR system, the respective fields are posted to Arbor. And in certain instances, there's an option for a two-way integration so that when an absence is created, amended or deleted within Arbor, the respective fields are updated in your MHR system.

## Key benefits

### Drive efficiencies

Save time by automating administrative tasks and eliminating duplication, freeing your team to focus on delivering true value

### Improve data accuracy

Ensure consistency and reduce manual errors for confident and effective reporting and decision making

### Enable strategic decision making

Offer access to real-time, data-driven insights, so you can make smarter decisions when they matter most

### Simplify compliance and reporting

Ensure you're always ready for the next inspection or report with real-time access to critical information
